Hybrid Workwear™

Inspired by fashion and the outdoors, we develop hybrid corporate and work clothes with a focus on design, choice of materials and need for freedom of movement. Clothes that adapt to the tasks at hand and the people performing them. Our extensive range offers something for everyone – whatever their role, work tasks, body shape or taste. Today, many disciplines and roles overlap, which means that people are often required to do more, deliver faster and be more flexible during their working day.

From the office to the field. For sunny mornings and windy nights.
For today and tomorrow. Textstar – Hybrid Workwear™.

Delivery - part of the service

Our garments are available when you want them. We know how frustrating it can be when you finally make up your mind, only to discover the garment isn't available. Admittedly, this happens with us too on very rare occasions. But in general, what you need is always in our warehouse – right now. We have full control of our inventory and dispatch deliveries straight from our own warehouse, so you can relax and rely on us.

Short lead times for unbeatable logistics.

We want our customers to feel we do our utmost to satisfy their needs. One request we get frequently is for efficient logistics. Many of our customers choose not to build their own warehouse. Instead, they let us handle the whole logistics chain. We stock your products on our shelves, ready to dispatch immediately an order arrives. We either keep a small number of items in stock with your print or embroidery on them, or we customise them with your design as soon as the order is placed. This is practical and efficient.

Less transport means lower environmental impact

Having a large warehouse reduces the need for transport. We economise on transport by placing large orders. This means less environmental impact. It also gives our customers the security of knowing that all our products are readily available and will be delivered promptly.

Do you work indoors, outdoors or both?

Whether you spend long hours in an office or work outdoors in a forest, it's important to be able to adapt your clothing for optimal work comfort. When you dress in layers, you create protective barriers that allow you to easily regulate your body temperature and adapt to the weather. Choose the number of layers based on the working day ahead. Here are a few useful tips:

Layer 1: Base layer that wicks away moisture

Our Light Weight Underwear (page 100) effectively wicks away moisture to promote optimal temperature regulation during low- to medium-intensity activity, and is made of quick-drying fabric to keep you warm and dry. In warmer weather or if you work indoors a lot, a technical T-shirt can also be very useful. We recommend our T-Shirt Function (page 38) which is made of bamboo and has high absorbency. A great base layer that keeps you dry all day.

Layer 2: Comfortable mid-layer that retains heat from your body

It's important to adapt your mid-layer to current weather conditions if you work a lot indoors or outdoors. Fleece is a popular choice for many. However, it's important not to use a mid-layer that's too insulating as this traps heat from your body against your skin, causing overheating and excessive sweating.

Find a mid-layer that suits you and your working day. We have many options to choose from, and one of our favourites is the Fleece Jacket Stretch (page 69). Its unique stretch and high breathability makes it flexible and comfortable.

Layer 3: Protection from the Nordic climate

In a constantly changing and often unpredictable climate, a comfortable, reliable outer layer is essential. We have several versions with different types of lining suitable for different seasons. Softshell is a very comfortable material for spring and autumn, but in winter a lined jacket may be more suitable. Softshell Jacket 3L (page 66) is wind- and water-resistant for slightly more challenging weather, and when the temperature drops we recommend our Service Winter Jacket (page 80) in breathable, waterproof material with taped seams and reflectors.

Bonus layer of your own choice

Everyone is different. People's sensitivity to cold as well as temperature variation during the day varies between roles and industries. The fourth clothing layer, which is often worn under layer 3, is ideal during breaks or in really cold conditions. We have many types of vests. Our stylish Hybrid Vest (page 72) is one of our best sellers and meets strict environmental criteria. In really cold weather, a down jacket like our Winter Down Jacket (page 79) can be your best friend.

WE DON'T TALK,

Sustainability is a widely talked about issue, but its meaning is not always clear. Sustainability is often discussed from three perspectives: environmental care, ethical production and financially sound solutions.

We aim for sustainability to permeate all aspects of our business. This requires us to make choices in many areas including design, production, logistics and recycling. We seek to balance the three sustainability perspectives so that we really make a difference.

We operate in a competitive market and must adapt to prevailing conditions – but we can't use that as an excuse for not making changes. Many things can be changed, even though it might not be easy. But who says it should be easy?

Safe, secure development

We believe it's vital to be able to show what you do – and how you do it. That's why we're engaged in a number of initiatives that ensure we continue developing and improving.

We believe in using widespread and recognised tools such

as certificates, registrations and tests to show we're on the right track. This keeps us developing in the right direction as a company, and shows you how we operate and strive for success.

Certificates that promote change

The Global Organic Textile Standard (GOTS) imposes perhaps the strictest requirements through the entire production chain. To obtain GOTS certification, it is necessary to demonstrate how products are produced in an ecologically sustainable manner. Texstar is proud to offer GOTS certified products in its portfolio today.

Amfori is a global organisation that brings together over 2,000 textile companies. Its mission is to enhance human prosperity and use natural resources responsibly. Amfori works with issues that require cooperation in order to make a difference, enabling businesses to drive changes together.

WE CERTIFY.

Certificates that provide peace of mind

Our ISO environmental certificate (ISO 14001:2015) is an important tool for us. It ensures that we never stop striving to further improve our performance.

Oeko-Tex is another international organisation that tests and certifies textile production. It allows consumers to rest assured that a product meets certain safety requirements with regard to harmful substances. Texstar products meet the requirements for Product Class II: items with direct prolonged or large-area skin contact.

In addition, the EU REACH Regulation requires all substances used to be registered, risk assessed and authorised. Needless to say, we take our responsibility and provide the information required according to REACH.

A clear direction

Certificates are important. You can read more about them on the next page. But we also take a more hands-on approach, instead of trusting individual producers to keep their promises.

We're not content with having agents and production offices check that our suppliers keep their promises. Instead, we work closely with our supplier factories and regularly visit them to check that their processes are in order.

You can't simply trust your first impressions. It's important to look around and examine everything in detail, speak to the staff and hear what they have to say. If there's a high staff turnover, for example, it could be a sign that something isn't right.

The dyeing process poses serious health and environmental risks. We aim for our partners to use closed systems in which the water is treated and reused. Far too many water flows have been polluted and will take a long time to recover.

We only use a third party for unannounced spot checks to ensure that production is not outsourced to unknown subcontractors.

Overall, we're moving in a clear direction: We're on the way towards a really sustainable product range, and this isn't just empty talk – we strive to take a clear step forward every year.

Six important commitments:

ISO 14001:2015 environmental certification

Texstar is environmentally certified according to ISO 14001:2015. This demonstrates our ambition to continuously improve and develop our environmental management so that everyone in the company works in the same direction. Our environmental policy also helps our subcontractors comply with our environmental goals. Our ISO certification supports us in achieving our continuous environmental improvement goals.

GOTS (Global Organic Textile Standard)

GOTS imposes strict requirements throughout the production chain with regard to both environmental impact and working conditions in the textile and clothing industries. GOTS supports organic, sustainable farming without the use of toxic pesticides and fertilisers, with the vision of achieving ecologically sustainable production in terms of materials, packaging and logistics. Read more on global-standard.org.

Amfori – trade with purpose

Amfori BSCI (Business Social Compliance Initiative) brings together over 2,000 retailers, importers, brands and associations from more than 40 countries. Amfori's mission is to enable each of its members to enhance human prosperity, use natural resources responsibly and drive open trade globally.

These are major challenges that can only be tackled through collaboration. Together we can influence and drive positive change on a large scale. Read more about this work and Amfori BSCI's 11 Principles on amfori.org.

Amfori BEPI provides control at all stages

The Amfori BEPI platform allows us to monitor the whole production chain from a sustainability perspective, and offers a tool for promoting sustainability right down to factory level. By focusing on the most important areas and locations in our sustainability efforts, we support the global goals of the Paris Agreement and UN Climate Goal 12: Responsible consumption and production. Read more on amfori.org.

REACH limits diffusion of hazardous chemicals

REACH is a European Union regulation aimed at reducing the diffusion of hazardous chemicals. REACH requires all old and new chemicals on the market to be registered, evaluated and authorised. This means that Texstar is required to:

- register the chemicals we manufacture or import
- prepare and supply a safety data sheet or equivalent information to the recipients of the chemicals
- ascertain whether a permit is required for the chemical in question
- if we want to continue using or releasing a chemical in a market where a permit is required, we must apply for a permit
- keep abreast with any limitations that apply to the chemical or mixtures containing it.

You can read more about REACH on the website of the Swedish Chemicals Agency (Kemikalieinspektionen), www.kemi.se.

Oeko-Tex Standard 100

Clothing production is a global process in which the various stages of production – from raw materials to finished products – are often located in different parts of the world. Oeko-Tex is an international organisation where textile products are tested and certified through all stages of production by independent international institutes. The Oeko-Tex criteria catalogue is aimed at creating a collective vision regarding potentially harmful substances.

Oeko-Tex provides companies in the textile and clothing industry with a set of common assessment standards, while giving end consumers the benefit of tested safety, for instance in the form of skin-friendly clothing.

The requirements of the standard vary according to the intended use of the end product, and are divided into four product classes. Texstar products meet all the requirements in Product Class II regarding the materials and components used. This gives you assurance that Texstar clothing is safe to wear against your skin. Read more about Oeko-Tex on www.oeko-tex.com.

STICA

STICA (The Swedish Textile Initiative for Climate Action) works to support companies in the textiles industry to pursue the goal of the Paris Agreement to limit the increase in global temperature by reducing greenhouse gas emissions (GHG).

T-SHIRT FUNCTION

319 SEK

texstar.se

Shop Texstar directly in your own webshop

It should be easy to be a Texstar customer. We are setting up an online shop in partnership with one of our resellers. You get access to the whole Texstar range and we take responsibility for delivering products according to your requirements – complete with logos and applications in accordance with your manual.

In our large warehouse, most items are continuously available for quick next-day delivery. Simple, flexible and accessible.

While our website texstar.se is our face to the world, the well-oiled machinery behind the scenes is what creates the real benefits in coordinating your purchases with us.

A flexible and customisable solution

More and more companies are seeking solutions that can easily be integrated into their business. Our online shop can be tailored to a company's corporate image, product range and preferred service level – which may include aspects such as availability, delivery times and giving Texstar responsibility for the entire stock management function.

From order to delivery

How it works. A company's online shop can be located on a separate website or integrated into its intranet. The company's authorised orderer logs in and orders the goods required. The orderer can immediately see the stock balance, delivery times, etc.

Most of the items are already tailored to the company, but you can add print and embroidery to certain items for

individual events. This is done on the MyLogo page – a convenient service that is easy for the orderer to use.

Full control and efficient logistics

After that, Texstar takes over the process and picks the articles from the company's shelves at our warehouse. The logos and applications are already tailored for your company, but can be further customised, e.g. for individual campaigns. Everything is packed and transported directly to the agreed location, giving you full control of deliveries and all costs.

Texstar supplies an integrated range

Texstar strives to continuously develop and improve. Our collection is designed to meet most needs in an organisation, with a range of clothing that suits everybody.

The products are delivered ready-packed and complete with logos, while a well-oiled distribution system allows us to offer just-in-time delivery on request.

We are proud of our ISO 9001:2015 quality certification, which attests to our continuous efforts to develop and improve in cooperation with our customers.

” It's incredibly easy to integrate Texstar's online shop, with logos correctly attached and full control of costs and deliveries. And the interface looks great too!

Teamwork for sustainable success

Teamwork is central to Texstar's collaboration with the CE Dealer Team. The CE Dealer Team has carefully chosen clothes from our broad collection – a collection designed to meet high demands in active and dynamic environments such as motorsport. Each of Texstar's garments is designed to meet the team's high energy levels and provide comfort and durability under highly intense conditions.

Our collaboration with the CE Dealer Team proves that our clothing is not only to do with individual performance, but also building teamwork. Seeing our clothes worn by the team members, from mechanics to drivers, underlines the common ambition and joint effort required to excel in motorsport.

Texstar is proud to be part of the CE Dealer Team's daily activity. The fact that our clothes are selected for their versatility and sustainability attests to the team's trust and confidence in our products. This partnership illustrates how, together, we can achieve a successful symbiosis of function, comfort and team spirit.

We at Texstar look forward to continuing to support the CE Dealer Team and other teams in their quest for excellence. We want our clothes to contribute to every team's success while reflecting our core values – innovation, sustainability and shared experiences.

” It fills me with pride to see how our clothes contribute to success – both on the race track and for a more sustainable future.

Mats Ågren, CEO Texstar

ELECTRIC RX

CE DEALER TEAM

by Volvo Construction Equipment

The CE Dealer Team is an initiative by Volvo Construction Equipment which involves developing and competing with 100% electric PWR RX1e race cars. They compete in the FIA World Rallycross Championship, one of six official world championships in motorsport alongside Formula 1 and World Rally Championship. The team won a prestigious silver medal in the World Rallycross Championship 2023.

DRIVERS

Klara Andersson

The first woman to compete for a full season in the World Rallycross Championship and a member of the Swedish Junior Team.

Niclas Grönholm

Bronze winner in the World Rallycross Championship 2023, where he established himself as one of the top drivers.

What the symbols mean:

WATER COLUMN

The degree to which your clothing needs to be waterproof depends on what your typical day is like and what work tasks you perform. The water column indicates how waterproof a garment is and the point at which water starts penetrating it. If you are in an environment with a lot of water and snow, a high water column is probably the best choice. However, if you are very active, garments with a lower water column might be preferable as they are usually more breathable.

BREATHABILITY

Materials that breath and allow sweat and water vapour to be wicked away from the body. This is particularly important if you are active during the day. Breathability is measured as the number of grams of moisture that a square metre of fabric lets through in 24 hours.

CLASSIFICATION

All garments certified according to EN ISO 20471 are divided into three safety classes: 1-3. Different safety classes can be achieved through a combination of different garments. This is known as combined certification. A garment's safety class depends on the size of the retroreflective and fluorescent areas.

QR CODE

To make things easier, we have included handy QR codes in the catalogue that take you straight to more information about a product, a category or a report. This provides quick access to information about choice of materials, sizes and important functions.

A person is sitting in a brown leather chair in a modern office setting. They are wearing a dark blazer and light-colored sneakers. A small black table in front of them holds a clear glass mug of coffee and some papers. The background features large windows with a view of a cityscape. A large, stylized 'X' graphic is overlaid on the image.

HYBRID WORKWEAR

Trousers

How many times do you bend down during your working day? Many people use a pedometer to count the number of steps they take. We're less aware of how many times we bend down and stand up, even though certain jobs involve bending or crawling around hundreds of times a day. With their comfortable stretch, Texstar trousers make bending down easy. And your trousers will keep their shape even after countless bends and stretches.

Trousers for everyone

Texstar has a wide range of trousers tailored to different needs. For some people, extra details are of the essence, while for others a simple, minimalist design is key. Our range includes everything from more basic styles to technical garments for demanding work conditions. We always aim to use the most innovative and sustainable materials to achieve the best fit on the market.

FUNCTION

At Texstar we know that every working day is unique. That's why our trousers offer everything from practical extra pockets to facilitate your daily work to pared-back styles for occasions that call for simplicity. Whether you need functional details or something more minimalist, our range is designed to suit your needs.

MATERIAL

Texstar's range spans from lightweight materials for straightforward work tasks to advanced 4-way stretch fabrics, all carefully selected with a focus on sustainability and function. We also use recycled materials and support environmental initiatives such as STICA, to promote a sustainable textiles industry and a greener future.

FIT

Fit means more than just how a pair of trousers fits immediately after putting them on. Whether your job is physically dynamic or sedentary, you need trousers that hold their shape all day long. Many of our trousers are sized in inches, making it easier to find the perfect size and fit.

Designed with a focus on users

Example

1

The basic trousers in our range are ideal for people who work in sectors such as service and staffing. They have a simple but functional design, and are perfect if you need basic, practical trousers without extra details to get in the way. They provide comfort and ease of movement without compromising on quality, and are perfect for jobs that require a minimalist, professional look.

FP46 / WP46
SERVICE PANTS

FS20
SERVICE SHORTS

2

The trousers at the next level in our range are slightly more advanced, with a focus on function. They are often made from better material and have more functional details, such as extra pockets and reinforcement at key points. These trousers are ideal for jobs requiring greater freedom of movement and functionality, such as in installation and light industry.

EXPLANATION

Why choose 4-way stretch, and when is it suitable?

If you've been familiar with Texstar's product range for a while, you're sure to have noticed that we love stretch material. 4-way stretch is becoming increasingly common, but what exactly is it?

Whatever type of garment you're looking for, we're likely to have a few styles in 4-way stretch. The amount of stretch material used in a garment varies. A garment might either have just a few stretch details or large stretch panels, while some garments are entirely made of stretch material.

4-way stretch means the material can stretch in all directions. This provides increased comfort and ease of movement, and also gives us greater scope for designing garments with an optimal fit, however much

you need to move around at work.

Regardless of a garment's function and area of application, the possibility and need for using stretch material can vary. For example, trousers subjected to tough wear might need to have large panels of thick, material that doesn't stretch. In such cases, it can still be very useful have 4-way stretch on the parts of the garment that require high mobility, such as the crotch area and knees.

If you have high requirements for function and mobility, choose trousers made entirely from 4-way stretch material. They provide maximum comfort and you'll never feel restricted when doing your work or running to catch a bus.

FS12
DUTY STRETCH SHORTS

SAFETY

Take good care of your knees. You only have one pair.

Our work trousers are designed for use in many different roles and sectors. This means they have to be suitable for a variety of tasks and positions without compromising on design, comfort or ease of movement.

Our knee pads fit all our trousers with integrated knee pad pockets. They are made of thin, lightweight material and designed to fit into a flexible working day and promote a correct knee position.

Read more about our AK01 knee pads on page 98. Your knees will thank you.

T-shirt + Pique

Some jobs are tougher than others. Like driving a truck that can lift over 2 tonnes vertically to a height of more than 6 metres. This involves enormous force and leaves no margin for error. Although Texstar's clothing can't promise to eliminate errors, we can make sure your team members look well coordinated in matching colours – whatever job they do. For instance, our T-shirts and pique shirts have become everyday personal favourites among staff members'. Many even wear them outside work because they look great and feel comfortable.

TS13
CREW T-SHIRT

INFO

Texstar Sustainable Garment™

Texstar Sustainable Garment is Texstar's new range of sustainable clothing. All the garments are GOTS certified. The GOTS standard imposes strict requirements throughout the production chain with regard to both environmental impact and factory working conditions.

GOTS supports organic, sustainable farming without the use of toxic pesticides and fertilisers, with the vision of achieving ecologically sustainable production. Among other things, this means only using sustainably farmed organic cotton. At present, only 1% of the world's cotton production is organic, and the industrial farming process uses vast amounts of water to produce just one T-shirt.

Texstar is working on making its entire range as environmentally sustainable as possible. There's still a long way to go, but we're doing our best. This places high demands on us as producers to offer sustainable options, and on consumers to demand products that contribute to a better world.

Welcome to the future - welcome to Texstar Sustainable Garment.

PS03 / PSW3

Outer fabric: 43 % wool, 53 % New Life recycled polyester, 4 % elastane. Lining 100 % polyester.

Q-nr 280

From plastic to perfection

Plastic is the main type of waste found in the world's oceans, which are becoming dumping grounds at an ever faster rate with devastating consequences for marine life. Every year, increasingly vast quantities of plastic accumulate in the sea. This is something we can help to change.

The TAILOR's REPEAT collection with NEWLIFE™ Recycled Polyester helps reduce environmental impact by making sustainable changes which involve taking greater product responsibility and producing clothes in a more eco-friendly and resource-saving way. The material in the REPEAT suit is a mixture of NEWLIFE polyester from recycled PET plastic bottles and virgin wool/Merino wool (mulesing-free) with elastane stretch for extra comfort. REPEAT garments are designed and made to last longer, thus prolonging their useful life and reducing environmental impact.

VV04
VEST LEON

♂ XXS-6XL

Q-nr 280

Softshell + Fleece

If your job involves alternating a lot between indoors and out, for instance if you're a sales rep or a driver, it can be bothersome to have to constantly get in and out of your jacket. A softshell is the perfect solution.

Find your favourite in our Softshell range

Some say it's a warm layer worn outside their shirt. Others say the most important garment is one that keeps out the wind. Softshell is the go-to favourite for most people – whether they work indoors, outdoors, in the heat, or in the cold.

We have designed the perfect softshell series that has something for everyone. From the lightweight vest on the trade fair floor to the lined jacket designed for our raw Nordic climate.

Discover the whole product family at [texstar.se/en](https://www.texstar.se/en).

Hi-Vis Clothing

It's smart to be visible. Texstar's hi-vis clothing keeps you visible in vulnerable work settings. The garments conform to the international EN ISO 20471 standard for high visibility workwear.

Hi-Vis

Texstar Hi-Vis makes you shine

Make sure you and your colleagues are always visible. Texstar's Hi-Vis collection keeps you visible in vulnerable work settings and all light conditions.

The importance of hi-vis clothing cannot be overstated in vulnerable work settings. You may be hard to see in dark or twilight conditions – and you shouldn't take any chances. Make sure you wear the right type of hi-vis clothing for your job.

It is crucial that the clothing fits well and is comfortable to wear, without compromising on safety. Like all Texstar products, our Hi-Vis range of high visibility clothing is well-designed with smart details. This is important to us.

Visibility in all conditions

You might be especially hard to see in the dark and at twilight, particularly

for people driving vehicles or operating mechanical equipment. But reduced visibility can also occur in daylight conditions.

In such situations, it's advisable to wear garments that make you more visible, with fluorescent colours in daylight conditions and reflectors that show up in headlights.

Hi-Vis 1.0 – a basic collection

Many of Texstar's customers have requested high visibility products, so we're now releasing the first part of our new Hi-Vis collection. The collection consists of five garments specially

designed for the transport, staffing and construction sectors.

EN ISO 20471 – a uniform standard

The international EN ISO 20471:2013 standard imposes requirements for high visibility workwear. It is based on minimum areas of retroreflective, fluorescent and/or combined performance materials and how they should be positioned on workwear.

Texstar Hi-Vis is based on this standard, and can be combined with other certified garments to achieve the required safety class.

INFO

Combined certification for enhanced visibility

All garments certified according to EN ISO 20471 are divided into three safety classes: 1–3. Different safety classes can be achieved through a combination of different garments. This is known as combined certification. A garment's safety class depends on the size of the retroreflective and fluorescent areas.

Texstar Hi-Vis is classified according to this system. The table shows the minimum areas required in order to be approved under the standard. Contact us to find out more about Texstar Hi-Vis and the maximum size your printed and embroidered applications can be in order to remain compliant with a given safety class.

Material	Fluorescent (m ²)	Retroreflective (m ²)
① Class 1	0,14	0,1
② Class 2	0,5	0,13
③ Class 3	0,8	0,2

Minimum area required for compliance with the safety classes according to EN ISO 20471.

Q-nr 378

Security Guards

Security guards are frequently on the move – getting in and out of cars, doing rounds, responding to call-outs, or guarding entrances and specific locations where they represent their company. Wearing comfortable and practical work clothes makes the job a little easier. And of course, it's an added plus if the clothes look good too. The Texstar Security collection for security personnel is specially designed to meet high demands for comfort and good fit. And needless to say, they come in a wide range of sizes and in women's and men's cuts in line with the Texstar concept. Everyone should feel good wearing Texstar clothing.

NEW

AS01
TEXSTAR TUBE

🌀 One size

Tube in soft, comfortable jersey with a printed X logo.

100% polyester

Q-nr 413

Care Instructions

All Texstar clothes are carefully tested and easy to care for. Follow the washing instructions to maximise the garment's lifespan while caring for the environment:

- Always sort clothing according to temperature and colour. Garments marked "Wash with similar colours" may run during washing and stain other clothing. This problem usually disappears after a few washes.
- Coloured garments should always be washed at the highest recommended temperature for each garment.
- To protect zips, close them before washing.
- It is usually unnecessary to include a pre-wash in the washing cycle. Treat stubborn stains with stain remover before washing.
- Coloured clothing should be washed with special detergent for coloured fabrics to prevent fading.
- Dose the detergent according to the package instructions and your water hardness. Your local council can usually provide information on the water hardness in your area.
- Avoid detergents containing the bleaching agents sodium hypochlorite, sodium perborate or sodium percarbonate.
- Also check that your detergent is appropriate for the temperature you are washing at.
- Do not use fabric conditions.
- Most clothes benefit from being hung up to dry. Always shake and stretch them out before hanging. This is particularly important for knitted materials.
- If you choose to tumble dry clothing, stop before it is completely dry to prevent unnecessary shrinkage and wear.

Size Guide

– find your size

We offer a range of sizes to help you find the perfect size. When choosing a sweater or jacket, check the size of garments you already own that fit you well. Then compare them to our tables to find your size. Our trousers are sized in inches, not centilong. This is because we offer several fits for each size, to help you find the perfect fit. Check your measurements to pick garments that will fit you like a glove. It's easy, really: all you need is a tape measure.

How to measure:

1 Chest

Measure around the fullest part of your chest.

2 Waist

Measure your waist at the height where you usually wear your jeans. Consider the type of jeans you usually wear: if they are low-waisted, measure lower down. If they are high-waisted, measure higher up. If you tend to wear your jeans at hip height, measure there.

3 Hip

Measure around the fullest part of your hip.

4 Inseam

When you measure the length of a pair of trousers, always measure the inseam (the inside part of the leg). The easiest way is to measure a pair of trousers that fit you well. Measure from the crotch down to the bottom of the leg.

Tip! If you own a pair of jeans that fit you well, you can check what size they are. Jeans sizes consist of two different measurements (in inches), like 30/32. The first number is the waist measurement, the second is the length measurement.

FJ87	Hi-Vis Softshell CL3	91

Retailers have a right to set their own prices. Texstar reserves the right to change the prices at any time. We make reservation for prior orders and selling out of goods. Because Texstar is continuously developing its products, slight variations may occur between depicted products and actual products. We accept no responsibility for printing errors and colour discrepancies between depicted and actual products.
